INDEX TO VOLUME ONE

B. A. Afzelius. *The Matrix Granules of Mitochondria: A Review* 375
M. K. Agarwal. *Corticosteroid Enzyme Induction and Control of Specific Gene Expression in Mammalian Liver* 207
C. J. Avers. *Peroxisomes of Yeast and Other Fungi* 25
T. Barnard. *The Matrix Granules of Mitochondria: A Review* 375
D. S. Beattie. *The Synthesis of Mitochondrial Proteins* 1
A. S. G. Curtis. *Intra- and Inter-membrane Interactions of the Cell Surface* . . . 179
Marianne Dauwalder. *Functional Aspects of the Golgi Apparatus* 225
M. C. W. Evans. *Photosynthetic Phosphorylation in Chloroplasts* 197
J. B. Finean. *The Development of Ideas on Membrane Structure* 363
Peter J. Goldblatt. *Molecular Pathology of the Endoplasmic Reticulum* 147
D. O. Hall. *Photosynthetic Phosphorylation in Chloroplasts* 197
L. S. Hnilica. *Nuclear Proteins in Genetic Restriction—I. The Histones* 39
L. S. Hnilica. *Nuclear Proteins in Genetic Restriction—II. The Nonhistone Proteins in Chromatin* 107
L. S. Hnilica. *Nuclear Proteins in Genetic Restriction—III. The Cell Cycle* 311
Joyce E. Kephart. *Functional Aspects of the Golgi Apparatus* 225
J. T. O. Kirk. *The Genetic Control of Plastid Formation: Recent Advances and Strategies for the Future* 333
D. Lloyd. *A Hypothesis of Nuclear–Mitochondrial Interactions for the Control of Mitochondrial Biogenesis Based on Experiments with* Tetrahymena pyriformis 91
A. H. Maddy. *The Isolation and Purification of Membrane Proteins* 293
S. K. Maihotra. *On the Structure of Membranes of Mitochondria* 171
M. E. McClure. *Nuclear Proteins in Genetic Restriction—III. The Cell Cycle* 311
W. G. Nicholl. *A Hypothesis of Nuclear–Mitochondrial Interactions for the Control of Mitochondrial Biogenesis Based on Experiments with* Tetrahymena pyriformis 91
A. I. Oparin. *Routes for the Origin of the First Forms of Life* 75
M. L. Petermann. *How does a Ribosome Translate Linear Genetic Information?* . . . 67
R. K. Poole. *A Hypothesis of Nuclear–Mitochondrial Interactions for the Control of Mitochondrial Biogenesis Based on Experiments with* Tetrahymena pyriformis 91
G. I. Roach. *A Hypothesis of Nuclear–Mitochondrial Interactions for the Control of Mitochondrial Biogenesis Based on Experiments with* Tetrahymena pyriformis 91
Günther Siebert. *The Biochemical Environment of the Mammalian Nucleus* 277
T. C. Spelsberg. *Nuclear Proteins in Genetic Restriction—I. The Histones* . . . 39
T. C. Spelsberg. *Nuclear Proteins in Genetic Restriction.—II. The Nonhistone Proteins in Chromatin* 107
J. R. Tata. *Ribosomal Segregation as a Possible Function for the Attachment of Ribosomes to Membranes* 83
G. Turner. *A Hypothesis of Nuclear–Mitochondrial Interactions for the Control of Mitochondrial Biogenesis Based on Experiments with* Tetrahymena pyriformis 91
W. Gordon Whaley. *Functional Aspects of the Golgi Apparatus* 225
J. A. Wilhelm. *Nuclear Proteins in Genetic Restriction—II. The Nonhistone Proteins in Chromatin* 107
J. A. Wilhelm. *Nuclear Proteins in Genetic Restriction—I. The Histones* 39
